p. 714-738-6540 | f. 714-738-3110

Instructions

This document contains four sections that comprise the Waste Reduction and Recycling Plan:

Section 1: ***General Project and applicant information***

Section 2: ***Demolition Waste Worksheet***

This section should contain an itemized list of debris generated by the demoltion portion of the project. Enter debris weight ***OR*** volume, but not both, into each section of the sheet, and it will calculate the diversion percentage. If you are using a printed version of this sheet, multiply any volume values by their appropriate conversion, and you will have weight in tons. If different calculations are used, please explain in the notes field. If waste will be sent to a mixed processing facility and not sorted on site, use the mixed debris fields.

Section 3: ***Construction Waste Worksheet***

This section should contain an itemized list of debris generated by the construction portion of the project. Enter data exactly as you would for the Demoltion worksheet.

Section 4: S*ignatures*

Diversion Requirements:

- At least **50%** of all waste from qualifying construction and Demolition projects, not incuding soil, rock, and gravel.
- At least **50%** of all soil, rock and gravel.

If project will only involve either construction or demolition, only the appropriate worksheet will need to be submitted, along with the project information and signatures.

If project will use a container from ***MG Disposal****, there is no need to fill out the worksheets (Sections 2 and 3), just check the appropriate box on the project information sheet and submit it along with the signature page.*

Demolition Waste Worksheet

Enter either volume or weight of each type of debris into the appropriate column, along with name and any diversion rate of each diversion or disposal facility.
All Conversions are in tons per cubic yard, unless otherwise noted. ***Enter only volume OR weight of each material.*** App. #

Materials	Estimated Total Waste				Tons Diverted			Disposed	Facility
